

ENERGY EFFICIENCY PERFORMANCE MEASUREMENT AND VERIFICATION **EXPERT**

TRAINING AND CERTIFICATION PROGRAM

INTERNATIONAL
PERFORMANCE
MEASUREMENT
& VERIFICATION
PROTOCOL

Topic: What is the importance of the M&V plan for an Energy Retrofitting Project? with Introductory Professional Certification M&V Training (PMVA™ and PMVE™)

The field of Measurement and Verification (M&V) is rapidly evolving. In today's market, driven by stringent carbon targets and financial accountability, simply installing energy-efficient equipment is insufficient. Regulators, investors, and corporate leadership now demand verified, data-proven results. Modern M&V, governed by international standards has become the critical practice for transforming energy savings from an estimate into a credible, defensible metric, essential for securing funding and validating sustainability claims.

In this session, we will explore:

- M&V Update
- Role of M&V in Energy Retrofitting Projects
- Upcoming Professional Certification Course for M&V – PMVA™ (Performance Measurement and Verification Analyst) and PMVE™ (Performance Measurement and Verification Expert)

Event details:

Date: 9 Feb 2026

Time: 10:00 – 11:30

Language: Cantonese and English terms

Speaker: Ir Gary Chu (EVO® L3A, L3E Instructor)

An electronic copy of CPD attendance certificate will be issued to participants with attendance within one month after the live webinar.
